

AI Usage Declaration

I declare that I used ChatGPT only as a learning and guidance resource during the development of this assignment. The AI was used to help me understand Android Studio, Kotlin programming concepts, XML layouts, debugging errors, and general Android development practices.

I wrote, modified, and tested the application myself based on my understanding. I also customized the code, adjusted the user interface, resolved build and runtime issues, and implemented the required functionality independently. The AI was not used to generate a complete assignment for direct submission but rather to explain concepts, suggest improvements, and assist in learning during the development process.

I confirm that the final submitted work reflects my own understanding and implementation.
